0001 BY: HUGH BLAIR-SMITH IL7-238E M573 XT 1215 DECEMBER 13, 1967

0002 THIS DOCUMENT LISTS ALPHABETICALLY ALL THE OPERATION CODES (CARD COLUMNS 18-23) RECOGNIZED BY THE YUL
 0004 ASSEMBLERS FOR BLK2 AND AGC. EACH OP CODE IS ACCOMPANIED BY SOME VITAL STATISTICS: TYPE, ONE OR TWO REFERENCES
 0006 (CITATIONS) TO FULLER DOCUMENTATION, EQUIVALENT NAME(S), SCOPE (DEGREE OF GENERALITY), MEANING OF APPENDED
 0008 ASTERISK, AND THE SIGNIFICANCE OF THE ABBREVIATION. THERE IS ALSO A PAGE WITH SIMILAR INFORMATION ON ALL LEGAL
 0010 CONTENTS OF COLUMNS 1 AND 8. DETAILED DESCRIPTIONS OF THE COLUMNS OF THE OP CODE GUIDE FOLLOW.

0012 OP CODE: THE ALPHABETIC ORDERING IS THE CLASSICAL PUNCHED-CARD COLLATING SEQUENCE: BLANK, SPECIAL CHARACTERS,
 0014 ALPHABET, NUMERALS. EVERY OP CODE SHOWN WITH AN ASTERISK, E.G. BBCON*, IS ALSO LEGAL WITHOUT IT, E.G. BBCON.

0016 TYPE: Op CODES ARE CLASSIFIED INTO THE FOLLOWING TYPES:

0017 ADR CON (ADDRESS CONSTANT), ONE OR TWO WORDS MADE UP OF ONE OR MORE ADDRESSES BUT NO MACHINE OP CODES;
 0019 CLERICAL, AN INSTRUCTION TO THE ASSEMBLER RATHER THAN TO THE AGC;
 0020 INSTR (INSTRUCTION), A WORD DIRECTLY EXECUTABLE BY THE AGC;
 0021 MERGE (MERGE CONTROL CARD), AN INSTRUCTION TO THE FILE-UPDATING PART OF THE YUL SYSTEM, GOVERNING MERGING
 0023 OF INPUT CARDS WITH OLD PROGRAM;
 0024 NUM CON (NUMERIC CONSTANT), ONE OR TWO WORDS REPRESENTING A NUMBER;
 0025 PRET OP (INTERPRETIVE OP CODE), PACKED 2 TO A WORD IN INTERPRETIVE PROGRAMS; AND
 0027 OBSOLETE, ONE CODE (MODIFY) WHICH IS RECOGNIZED BY YUL-1800, BUT DOESN'T DO ANYTHING USEFUL.

0029 REF/PAGE: THE FOLLOWING REFERENCES ARE CITED:

0030 * D (DIGEST), HUGH BLAIR-SMITH, "A YUL PROGRAMMER'S DIGEST," REVISION 9, DECEMBER 13, 1967 (COMPUTER PRINTOUT);
 0032 G (GUIDE), THIS DOCUMENT;
 0033 I (INTERPRETER BOOK), CHARLES A. MUNTZ, "USERS GUIDE TO THE BLOCK II AGC/LGC INTERPRETER," APRIL 1965 (R-489);
 0035 M (MACHINE BOOK), HUGH BLAIR-SMITH, "AGC4 MEMO #9 - BLOCK II INSTRUCTIONS," REVISED JUNE 1, 1967;
 0037 T (TIPS), HUGH BLAIR-SMITH, "YUL TIPS," PUBLISHED FROM TIME TO TIME IN "THE SUNLITER" (JENNY FLAHERTY, ED.);
 0039 Y (YUL BOOK), RAYTHEON AGC INFORMATION SERIES ISSUE 13, "YUL PROGRAMMING SYSTEM," 5 DECEMBER 1963 (FR-2-113).
 0041 EACH CITATION IS GIVEN IN THE FORM R/PP; I.E. Y/80 MEANS PAGE 80 OF REFERENCE Y. IN MOST OF THE CITATIONS OF
 0043 THE DIGEST, A SPECIAL SERIES OF PAGE NUMBERS IS USED: C1, C2, C3, C4. EACH OF THESE REFERS TO TWO PLACES AT
 0045 ONCE, ONE IN THE SECTION "AGC BLOCK II INTERPRETIVE CODES: ASSEMBLY RULES FOR BLK2" AND ONE IN THE SECTION
 0047 "AGC BLOCK II INTERPRETIVE CODES: ASSEMBLY RULES FOR AGC." FOR EXAMPLE, C2 REFERS TO "USER'S OWN PAGE NO. 2"
 0049 IN BOTH SECTIONS. THIS DEVICE HELPS IN FINDING THE DIFFERENCES BETWEEN THE TWO ASSEMBLERS. THE "PAGE NUMBER"
 0051 IN A YUL TIP CITATION IS REALLY THE SERIAL NUMBER OF THE TIP. WHERE TWO CITATIONS ARE GIVEN, THE FIRST IS THE
 0053 BETTER OR MORE BASIC ONE.

0054 SAME AS: AN OP CODE IN THIS COLUMN HAS EXACTLY THE SAME EFFECT ON THE ASSEMBLER AS THE ONE ON THE LEFT, THOUGH
 0056 PROGRAMMING CONVENTIONS SOMETIMES MAKE AN ARTIFICIAL DISTINCTION, AS BETWEEN "EQUALS" AND "=" IN DISKERAS ETC.
 0058 WHEN AN OP CODE IN THIS COLUMN IS DEFINITELY A LESS PREFERRED ONE, IT IS ENCLOSED IN ANGLE BRACKETS <THUS>.

0060 SCOPE: AN OP CODE MARKED *GEN* IS GENERAL, THAT IS, THE SAME FOR ALL COMPUTERS SERVED BY YUL-1800, EXCEPT
 0062 INSOFAR AS PARAMETERS SUCH AS WORD LENGTH MAKE A DIFFERENCE. IF IT IS MARKED "SAME," IT IS UNIQUE TO THE BLOCK
 0064 II AGC, BUT THE SAME IN THE BLK2 AND AGC ASSEMBLERS. "DIFF" MEANS THAT THE OP CODE IS TREATED DIFFERENTLY BY
 0066 THE BLK2 AND AGC ASSEMBLERS, IN WAYS THAT CAN BE FOUND THROUGH THE CITATIONS.

0068 EFFECT OF *: THE OPTIONAL ASTERISK EITHER MEANS INTERPRETIVE INDEXING OR IT HAS SOME SPECIAL MEANING THAT CAN
 0070 BE FOUND THROUGH THE CITATION IN THIS COLUMN.

0071 SIGNIFICANCE OF ABBREVIATION: USUALLY, THE PURPOSE OF THIS COLUMN IS SIMPLY TO SHOW WHICH WORDS WERE COM-
 0073 PRESSED, BENT, FOLDED, AND MUTILATED TO FORM THE OP CODE. WHENEVER THIS YIELDS LITTLE MEANING, ESPECIALLY IN
 0075 THE RARELY USED CODES, THERE IS ADDITIONAL INFORMATION. HOWEVER, THIS COLUMN IS NO SUBSTITUTE FOR THE CITED
 0077 REFERENCES FOR FINDING OUT WHAT A GIVEN OP CODE REALLY DOES.

0583 NOTES ON THIS PAGE
 0584 -----

0585 BLANK COLUMN 1: THE DECODING OF THIS TYPE IS GOVERNED BY THE OP CODE IN COLUMNS 18-23 UNLESS COLUMN 8 CONTAINS
 0587 A 9, IN WHICH CASE THE CARD IS A RIGHT-PRINT REMARKS CARD, IRRESPECTIVE OF COLUMNS 18-23. IN FACT, A 9 IN
 0589 COLUMN 8 WILL OVERPOWER ANY COLUMN 1 CHARACTER EXCEPT *, S, AND Y. SPECIAL CASE: WHEN "ASSEMBLING FOR 1800,"
 0591 BLANK IN COLUMN 1 IS EQUIVALENT TO R IN COLUMN 1. THAT'S WHAT'S SO ODD ABOUT REFERENCES D AND G.

0593 * IN COLUMN 1: EITHER A MONITOR CARD OR A Y CARD MARKS THE END OF INPUT TO ANY YUL TASK. SYSTEM/360 MONITOR
 0595 CARDS BEGIN WITH EITHER // OR /*. IN ANY CASE, MONITOR CARDS ARE SUPPLIED BY THE OPERATOR.

0597 J IN COLUMN 1: THE LEFTOVER RULES GIVEN AT Y/72 HAVE BEEN REFINED TO MAKE THE LEFTOVER GO INTO THE RIGHT BANK,
 0599 AS FAR AS THIS CAN BE DETERMINED. THE DETERMINATION IS BASED ON THE STATE OF THE LOCATION COUNTER AT THE TIME
 0601 THE LEFTOVER IS ENCOUNTERED, AS FOLLOWS:

0602	LOCATION COUNTER:	UNDETERMINED	UNSWITCHED ERAS.	ANY E-BANK E3-E7	FIXED-FIXED	ANY F-BANK 00-43
0604	LEFTOVER WORD(S):	ANYWHERE IN FIXED	ANYWHERE IN FIXED	ANYWHERE IN FIXED	IN FIXED-FIXED	IN SAME F-BANK
0606	LEFTOVER ERASE:	ANYWHERE IN ERAS.	IN UNSWITCHED E	IN SAME E-BANK	ANYWHERE IN ERAS.	ANYWHERE IN ERAS.

Essential VHDL

0608 NOTES ON SOME OP CODES
0609 -----

0610 (BLANK), <P>

0611 THIS IS THE CODE FOR INTERPRETIVE ADDRESS CONSTANTS. REFER TO D/C1-D/C4 FOR THE NUMBER AND KINDS OF
0613 ADDRESSES REQUIRED BY EACH INTERPRETIVE OP CODE. THIS OP CODE IS REQUIRED FOR ALL KINDS OF ADDRESSES EXCEPT C;
0615 C ADDRESSES ARE REALLY OPERANDS AND MAY HAVE THIS OR ANY OTHER OP CODE THAT GENERATES A ONE-WORD CONSTANT OR
0617 INSTRUCTION.

0618 =, EQUALS, <IS>

0619 THE RULES GOVERNING ADDRESS SYMBOLS NOT PREDEFINED IN PASS 1, GIVEN AT Y/81, HAVE BEEN IMPROVED. THE
0621 CURRENT RULE IS THIS: IF THE ADDRESS SYMBOL HAS NOT BEEN PREDEFINED WHEN THE EQUALS CARD REFERRING TO IT IS
0623 ENCOUNTERED IN PASS 1, THEN THE LOCATION SYMBOL IS STORED IN THE SYMBOL TABLE WITH A POINTER TO THE ADDRESS
0625 SYMBOL'S PLACE IN THE TABLE (DEFINER THREAD) AND A 16-BIT FIELD CONTAINING THE SIGNED MODIFIER FROM THE ADDRESS
0627 FIELD, AND THE ADDRESS SYMBOL IS STORED IN THE SYMBOL TABLE WITH A POINTER TO THE LOCATION SYMBOL'S PLACE
0629 (DEFINEE THREAD). THERE ARE ALSO SOME COMPLICATIONS TO COVER THE CASE OF A SYMBOL THAT DEFINES SEVERAL SYMBOLS.
0631 THE UPSHOT OF ALL THIS IS THAT AN INTERMEDIATE PASS, CALLED PASS 1.5, RUNS AROUND THE SYMBOL TABLE CLEANING UP
0633 ALL UNFINISHED EQUALS DEFINITIONS BEFORE PASS 2 BEGINS. IF A DEFINER IS UNDEFINED OR ILL-DEFINED, ITS WHOLE
0635 TREE OF DEFINEES IS CALLED "NEARLY DEFINED," MEANING THAT THE FORM OF THE EQUALS DEFINITION IS ALL RIGHT, AND
0637 ONLY THE DEFINITION OF THE ADDRESS SYMBOL IS LACKING. SIMILARLY, ALL MEMBERS OF A VICIOUS CIRCLE OF EQUALS
0639 DEFINITIONS, AND THEIR OTHER DEFINEES, ARE CALLED "NEARLY DEFINED." TO TAKE SOME EXAMPLES FROM Y/81:

0641 OUT1 IS BNK -4
0642 BNK EQUALS 15 PUTS INTO THE SYMBOL TABLE:

0643	LOCA:	OUT1		LOCB:	BNK		
0644		-4	(N)		15	(=)	(N FOR NEARLY DEF., = FOR DEF. BY =.)
0646		LOCB	0		0	LOCA	(DEFINER THREAD AND DEFINEE THREAD)

0648 WHEN PASS 1.5 FINDS OUT1 DURING ITS SCAN OF NEARLY DEFINED SYMBOLS, IT FOLLOWS THE DEFINER THREAD TO LOCB, WHERE
0650 IT FINDS THE DEFINITION OF BNK. IT THEN FOLLOWS THE DEFINEE THREAD TO LOCA, AND FILLS IN THE DEFINITION OF
0652 OUT1. THE SYMBOL TABLE ENTRIES BECOME:

0653	LOCA:	OUT1		LOCB:	BNK		
0654		11	(=)		15	(=)	
0655		0	0		0	0	

0656 THE IMPLICATION FOR THE PROGRAMMER IS THAT A TREE OF EQUALS DEFINITIONS MAY HAVE ANY DEPTH, BE OF ANY
0658 COMPLEXITY, AND THE DEFINITIONS MAY BE IN ANY ORDER, PROVIDED ONLY THAT THE TREE IS LOGICALLY VALID. THERE IS,
0660 HOWEVER, ONE VERY SMALL REWARD FOR HAVING A PREDEFINED ADDRESS SYMBOL: THE ADDRESS FIELD MODIFIER MAY LIE
0662 OUTSIDE THE RANGE -32767D TO +32767D, BECAUSE IT DOESN'T HAVE TO FIT INTO A 16-BIT FIELD.

ROYAL BUSINESS FORMS INCORPORATED

9929197

0664 =MINUS

0665 THIS CODE OPERATES BY SUBTRACTING THE LOCATION COUNTER VALUE FROM THE ADDRESS FIELD MODIFIER AND PROCEEDING EXACTLY AS FOR EQUALS, SO THE RESTRICTION AT THE END OF THE PRECEDING NOTE COULD BECOME IMPORTANT.
 0667 HOWEVER, IT IS STILL EASY TO GET AROUND: SUPPOSE TABLE AND ENDTABLE ARE KNOWN TO BE IN SUPER-BANK 4, THEN
 0669

0671 SETLOC TABLE

0672 SIZTABLE =MINUS ENDTABLE WORKS ONLY IF ENDTABLE IS PREDEFINED.

0673 THE ESCAPE IS TO WRITE INSTEAD:

0674 SETLOC TABLE -20000

0675 TEMENTABLE =MINUS ENDTABLE

0676 SIZTABLE EQUALS TEMENTABLE -20000

0677 =PLUS

0678 THIS CODE OPERATES BY ADDING THE LOCATION COUNTER VALUE TO THE ADDRESS FIELD MODIFIER AND PROCEEDING EXACTLY AS FOR EQUALS. THEREFORE REMARKS SIMILAR TO THOSE FOR =MINUS APPLY TO =PLUS, THOUGH THE CASE IS MUCH
 0680 LESS LIKELY.
 0682

0683 BANK

0684 THIS CODE OPERATES SIMILARLY TO BLOCK, AS DESCRIBED AT Y/77, EXCEPT IN TWO RESPECTS: THE BLOCK SIZE IN
 0686 BLK2 AND AGC IS 1024D = 2000, AND THE BANK NUMBERS ARE 4 LESS THAN THE CORRESPONDING BLOCK NUMBERS, BECAUSE BANK
 0688 00 STARTS AT PSEUDO-ADDRESS 10000 INSTEAD OF 0. EXAMPLES:

0689 BANK 20 FIND FIRST UNUSED LOCATION IN BANK 20

0690 BANK 0 +1400 FIND FIRST UNUSED LOCATION IN LAST PARAGRAPH OF BANK 00

0692 BANK 3 IS ILLEGAL: THAT'S NONEXISTENT MEMORY

0693 BANK FIND FIRST UNUSED LOCATION IN SAME BANK AS LOCATION COUNTER VALUE

0695 SEE ALSO NOTE ON BLOCK.

0696 BBCON*

0697 BITS 7-5 OF A BBCON WORD CONTAIN THE CURRENT SBANK, SETTING 000 IF NONE HAS BEEN ESTABLISHED IN THE
 0699 PROGRAM) OR, IF THE FIXED-BANK NUMBER IS 30 OR MORE, IT CONTAINS THE CORRESPONDING SUPER-BANK NUMBER, WHICH IS
 0701 ALWAYS THE EIGHTH DIGIT OF THE BANK NUMBER. IN THE AGC ASSEMBLER, THE E-BANK VALUE MUST BE GIVEN BY A ONE-SHOT
 0703 EBANK* DECLARATION. THIS IS OPTIONAL IN BLK2. IN EITHER ASSEMBLER, A ONE-SHOT SBANK* MAY BE USED UNLESS IT
 0705 CONFLICTS WITH THE FIXED-BANK VALUE.

0706 THE STARRED VERSION, BBCON*, IS A SPECIAL IMPLIED-ADDRESS CONSTANT CREATED FOR THE BANKSUM CHECKING IN

0708 SELF-CHECK. THE ADDRESS FIELD MUST BE LEFT BLANK, AND THE WORD IS ASSEMBLED AS IF THE ADDRESS HAD BEEN THE

0710 HIGHEST ADDRESS OCCUPIED BY A WORD IN THIS ASSEMBLY. ASIDE FROM THAT, ALL THE BBCON RULES APPLY. THE EFFECT OF

0712 THE BBCON* WORD IS TO TELL SELF-CHECK WHICH IS THE LAST BANK THAT NEEDS ITS BANKSUM CHECKED.

0714 BLOCK

0715 THE MEMORY BLOCK SIZE IN BLK2 AND AGC IS 1024D = 2000, CONTRARY TO Y/77, WHICH GIVES THE BLOCK 1 AGC
 0717 PARAMETERS. THE BLOCK NUMBER IS THEREFORE OBTAINED BY SHIFTING THE PSEUDO_ADDRESS RIGHT 10 BITS, I.E.

0719 BLOCK #: 0 1 2,3 4 5 10 11 N
 0721 MEMORY: E0-E3 E4-E7 FIXED-FIXED BANK 00 BANK 01 BANK 04 BANK 05 ... BANK N-4

0723 AS FIXED_FIXED MEMORY HAS 2 BLOCK NUMBERS BUT NO BANK NUMBERS, IT IS NECESSARY TO USE BLOCK RATHER THAN BANK
 0725 WHEN SEEKING A FREE LOCATION IN FIXED-FIXED.

0726 AN ADDRESS FORMAT HAS BEEN ADDED TO BLOCK AND BANK SINCE Y/77 WAS WRITTEN: BLANK OR PLUS-SIGNED NUMERIC:

0728 BLOCK FIND FIRST FREE LOCATION IN SAME BLOCK AS LOCATION COUNTER VALUE
 0730 BLOCK +1000 FIND FIRST FREE LOCATION IN LAST HALF OF SAME BLOCK AS LOCATION COUNTER VALUE

0732 THE EFFECT IS TO ALLOW A BLOCK OR BANK CODE TO DEPEND ON A SYMBOLIC ADDRESS FIELD, WHICH IS LOCATED IN A PRE-
 0734 CEDING SETLOC.

0735 BNKSUM

0736 THIS CODE GENERATES THE END_OF_BANK PATTERN RECOGNIZED BY SELF CHECK IN ITS CHECKSUM TEST OF FIXED
 0738 MEMORY. MORE IMMEDIATELY, THE PATTERN IS RECOGNIZED BY YUL PASS 3, WHICH COMPUTES CHECKSUM WORDS AND MAKES THEM
 0740 THE LAST OCCUPIED WORDS IN EACH BANK. THE BLK2 AND AGC ASSEMBLERS TREAT BNKSUM THE SAME IN THE FOLLOWING
 0742 RESPECTS:

0743 (1) THE LOCATION FIELD SHOULD BE BLANK.

0744 (2) THE ADDRESS FIELD MUST CONTAIN EITHER A BANK NUMBER (THE USUAL CASE) OR AN ADDRESS IN FIXED MEMORY.
 0746 FOR BNKSUM PURPOSES, FIXED-FIXED IS INDICATED BY BANK NUMBERS 2 AND 3.

0748 (3) IF THE INDICATED BANK IS EMPTY, AND NO HIGHER BANK IS OCCUPIED, BNKSUM GENERATES NO WORDS, AND PRINTS
 0750 "NO NEED" IN THE ASSEMBLY LISTING. THUS A COMPLETE LIST OF BNKSUM CARDS WILL SERVE A PROGRAM OF VARYING
 0752 LENGTH.

0753 (4) BNKSUM TRIES TO GENERATE TWO CONSECUTIVE ADRES_SELF WORDS, THAT IS, TC_TO_SELF WORDS FLAGGED AS CON-
 0755 STANTS TO STOP AN ALL-DIGITAL SIMULATION QUICKER THAN A TRUE TC_TO_SELF, IF EXECUTED. THE PLACING OF
 0757 THE FIRST WORD IS GOVERNED BY A SEARCH FOR THE FIRST UNOCCUPIED WORD IN THE BANK, REGARDLESS OF WHETHER
 0759 THE REST OF THE BANK IS EMPTY. IN PARTICULAR, IF THE FOLLOWING LOCATION IS OCCUPIED, THE SECOND ADRES-
 0761 SELF WORD GOES THERE ANYWAY, WITH A CONFLICT CUSS.

0762 IN THE BLK2 ASSEMBLER, AND IN AGC PROGRAM SUNBURST, SELF CHECK LOGIC REQUIRES BOTH ADRES_SELF WORDS
 0764 FOLLOWED BY A CHECKSUM WORD, THE LATTER CHOSEN SUCH THAT THE SUM OF ALL WORDS IN THE BANK ADD UP TO THE BANK
 0766 NUMBER. THE SUM IS COMPUTED IN A SLIGHTLY SPECIAL WAY, WITH PLUS OR MINUS OVERFLOW BEING CARRIED END-AROUND AS
 0768 A PLUS OR MINUS 00001. THE REQUIREMENT FOR BOTH ADRES_SELF WORDS MEANS THAT THE FIRST MAY BE PLACED NO LATER
 0770 THAN LOCATION 3775 OF THE BANK. IF ALL WORDS 2000-3775 ARE OCCUPIED, THE ADRES_SELF WORDS GO INTO LOCATIONS
 0772 3775 AND 3776 WITH A CONFLICT CUSS.

0773 BNKSUM (CONTINUED)

0774 THE AGC ASSEMBLER RULES CORRESPOND TO A CHANGE IN SELF-CHECK THAT WAS MADE AFTER BURST116 WAS FROZEN.
 0776 THE CHANGE IS THAT THE ADRES-SELF WORDS ARE PARTLY OR WHOLLY OMITTED IN A NEARLY FULL BANK. THAT IS, IF
 0778 LOCATIONS 2000-3775 ARE OCCUPIED, EITHER OR BOTH OF THE ADRES-SELF WORDS ARE OMITTED IN SUCH A WAY THAT THE
 0780 CHECKSUM WORD IS IN LOCATION 3777. TO ELIMINATE CONFUSION ABOUT THE AMOUNT OF ROOM LEFT IN A BANK, THE AGC
 0782 BNKSUM PROCEDURE PRINTS THE NUMBER OF WORDS (IN DECIMAL) FROM THE LOCATION OF THE FIRST ADRES-SELF WORD THROUGH
 0784 LOCATION 3776, THAT IS, THE ABSOLUTE MAXIMUM OF WORDS THAT CAN BE ADDED IN THAT BANK AND STILL LEAVE ONE
 0786 LOCATION FOR THE CHECKSUM. THE REQUIREMENT FOR THE CHECKSUM IN THE AGC ASSEMBLER IS DIFFERENT TOO: THE BANK
 0788 MUST ADD UP TO PLUS OR MINUS THE BANK NUMBER. TO SEE WHY, IMAGINE THAT BANK 25 IS FULL AND THAT LOCATIONS
 0790 2000-3776 ADD UP (CHECKSUM-FASHION) TO 40000, OR -37777. NOW NO CHECKSUM WORD CAN BE CHOSEN THAT WILL YIELD
 0792 00025 WHEN ADDED TO 40000, BUT A CHECKSUM WORD OF 37752 YIELDS $77752 = -25$. THIS CAN NEVER HAPPEN IN BLK2
 0794 BECAUSE THE LAST TWO WORDS BEFORE THE CHECKSUM WORD CONTRIBUTE AT LEAST +4001 TO THE SUM, WHICH THEREFORE HAS A
 0796 POSSIBLE RANGE OF -33774 TO +37777. IF BNKSUM FINDS A BANK'S 10240 WORDS ALL OCCUPIED, IT PUTS 03777 INTO
 0798 LOCATION 3777 OF THE BANK, WITH A CONFLICT CUSS.

0799 THIS IS A GOOD PLACE TO SAY SOMETHING ABOUT THE COMPUTATION OF THE CHECKSUM WORD IN PASS 3. IT WILL
 0801 ACCEPT THE FIRST CONSECUTIVE PAIR OF TC-SELFS (OR ADRES-SELFS) IN A BANK AS THE END-OF-BANK MARKER, AND TRY TO
 0803 PUT THE CHECKSUM WORD IN THE FOLLOWING LOCATION, BUT IT'S PERFECTLY HAPPY IF THERE IS NO SUCH PAIR (MEANING NO
 0805 CHECKSUM IS WANTED). THE GENERAL PRINCIPLE IS TO GIVE YOU EITHER A CHECKSUM OR A REASON WHY NOT. IF A BANK IS
 0807 COMPLETELY FILLED, WITH NO CONSECUTIVE PAIR OF TC-SELFS, THE LAST WORD IN THE BANK GETS THE PREFIX "NOSUM" IN
 0809 THE OCTAL STORAGE MAP. IF THERE IS AN UNOCCUPIED LOCATION BEFORE ANY PAIR OF TC-SELFS, IT IS MARKED "NO
 0811 CHECKSUM," AND NO ATTEMPT IS MADE TO COMPUTE ONE. IF A LOCATION IS EITHER A "BAD WORD" OR A "CONFLICT," THERE
 0813 IS NO CHECKSUM. IF THE LOCATION WHERE THE CHECKSUM WORD SHOULD GO IS OCCUPIED, THE OFFENDING WORD IS PREFIXED
 0815 "SUM" AND THE CHECKSUM IS ABANDONED. IF ANY WORDS AFTER THE CHECKSUM WORD ARE OCCUPIED, THE FIRST IS PREFIXED
 0817 "EOB" (END-OF-BANK ERROR). THE PREFIXES BEGINNING WITH "COUNT AS CUSS" AS LINES. A PECULIAR CASE ARISES IF THE
 0819 TC-SELFS ARE THE LAST TWO WORDS OF A PARAGRAPH BUT NOT THE END OF A BANK, AND THE FOLLOWING PARAGRAPH IS
 0821 UNOCCUPIED (BY EXPLICIT CODING, ANYWAY). A PARAGRAPH MUST BE CREATED JUST FOR THE CHECKSUM WORD, AND THE ONLY
 0823 FACILITY THAT DOES IT AUTOMATICALLY IS THE BNKSUM ROUTINE IN THE AGC ASSEMBLER.

0825 IN THE AGC COMPUTATION OF THE CHECKSUM WORD, THE RULE IS TO GIVE IT THE SMALLEST MAGNITUDE POSSIBLE.
 0827 IF THE SUM FROM THE BEGINNING OF THE BANK THROUGH THE LAST WORD BEFORE THE CHECKSUM IS POSITIVE (NEGATIVE), THE
 0829 CHECKSUM WORD IS CHOSEN TO MAKE THE WHOLE BANK ADD UP TO PLUS (MINUS) THE BANK NUMBER. IN AGC OR BLK2, BY THE
 0831 WAY, BANK 00 HAS TO ADD UP TO 77777 (-0).

0832 EBANK#

0833 THE AGC ASSEMBLER REQUIRES THE ADDRESS VALUE FOR EBANK# TO BE AT LEAST 10 AND AT MOST 3777--THAT IS, AN
 0835 ADDRESS IN ERASABLE MEMORY. THE BLK2 ASSEMBLER ALLOWS THESE, AND ALSO ALLOWS E-BANK NUMBERS 0-7.

0837 THE AGC ASSEMBLER REQUIRES A ONE-SHOT EBANK# DECLARATION BEFORE EVERY BBCON OR BBCON* AND 2BCADR OR
 0839 2CADR; THE BLK2 ASSEMBLER DOES NOT.

0840 EDRUPT

0841 THE BLK2 ASSEMBLER REGARDS EDRUPT AS AN IMPLIED-ADDRESS EXTRACODE AND ALWAYS ASSEMBLES IT 07000. THE
 0843 AGC ASSEMBLER REGARDS IT AS A FULL EXTRACODE REQUIRING A FIXED-MEMORY ADDRESS, AND IT IS THE AGC PROGRAMMER'S
 0845 RESPONSIBILITY TO SEE THAT THE ADDRESS IS BETWEEN 7000 AND 7777. THIS IS BECAUSE, IN THE FLIGHT-ROPE APPLICA-
 0847 TION, CONTROL RETURNS (AFTER CERTAIN RESUMES) TO THE EDRUPT INSTRUCTION, NOT TO THE EXTEND BEFORE IT, SO THAT IT
 0849 IS EXECUTED AS A TC INSTRUCTION. SEE T5JOB IN SUNDANCE FOR FURTHER INFORMATION.

0851 EVEN

0852 THIS CODE TAKES NO LOCATION OR ADDRESS FIELDS. IF THE LOCATION COUNTER VALUE IS EVEN, IT HAS NO EFFECT.
0854 IF THE LOCATION COUNTER VALUE IS ODD, IT IS INCREMENTED. THIS IS USEFUL IF IT'S DESIRED TO ALIGN DOUBLE-WORD
0856 QUANTITIES ON EVEN LOCATIONS, WHICH INCIDENTALLY GUARDS AGAINST BANK-STRADDLING. HOWEVER, IT SHOULD BE USED IN
0858 CONJUNCTION WITH LEFTOVER CONSTANTS TO FILL UP THE RESULTING HOLE. DON'T FEEL BAD IF YOU CAN'T USE IT.

0860 MM

0861 THIS CODE IS EQUIVALENT TO DEC EXCEPT THAT THE ARGUMENT IS LIMITED TO A MAGNITUDE OF 99. IT WAS INTRO-
0863 DUCED TO EASE THE TRANSITION FROM OCTAL TO DECIMAL MAJOR MODES, AND NOW HAS MOSTLY EYEBALL VALUE.

0865 MODIFY

0866 THIS CODE IS LISTED HERE MOSTLY FOR THE BENEFIT OF THOSE (LIKE THE YUL-360 PEOPLE) WHO READ THE YUL-
0868 1800 PROGRAM. THE CODE IS RECOGNIZED BUT IT IS NOT NOW INTENDED TO BE USED, AT LEAST IN FLIGHT PROGRAMS. IT
0870 TAKES NO LOCATION OR ADDRESS FIELD, AND ITS FUNCTION IS TO ACCEPT ALL CARD IMAGES COMING IN FROM TAPE IN A
0872 REVISION OR VERSION ASSEMBLY OR FROM THE DISC IN A TRANSFERRED ASSEMBLY, UP TO AND INCLUDING THE NEXT "END OF"
0874 CARD IMAGE, WHICH MARKS THE END OF EVERY PROGRAM AND SUBROUTINE FILE ON TAPE. THEN FURTHER CHANGE CARDS FROM
0876 THE CARD READER ARE MERGED WITH A SUBROUTINE CALLED BY THE MAIN PROGRAM, FOR THE DURATION OF THE CURRENT ASSEM-
0878 BLY ONLY. THE SUBROUTINE FILES ON TAPE ARE UNCHANGED. THE YUL-360 PEOPLE ARE BEGINNING TO USE THE WORD
0880 "MODIFY" IN THE SENSE OF "REVISE A SUBROUTINE."

0881 SUBRO*

0882 THIS CODE MAY ONLY BE USED IN A PROGRAM, I.E. SUBROUTINES CAN'T CALL OTHER SUBROUTINES. THE SUPPRESSION
0884 OF PRINTING CALLED FOR BY THE SUBDIRECTOR "SUPPRESS INACTIVE SUBROUTINES" WORKS THIS WAY: IF A SUBROUTINE HAS
0886 NOT BEEN CHANGED SINCE THE LAST ASSEMBLY OF THE PROGRAM CALLING IT, IT IS "INACTIVE," AND IF THE SUPPRESSION IS
0888 ON, THE ONLY LINES PRINTED ARE THE "END OF" LINE AND ANY CUSSED LINE WITH ITS CUSSSES. THESE ARE MADE TO APPEAR
0890 UNDER THEIR PROPER LOG SECTIONS.

0891 A SUBROUTINE MAY BE MADE PERMANENTLY ACTIVE WITH RESPECT TO A GIVEN PROGRAM IF IT IS CALLED BY SUBRO*
0893 INSTEAD OF SUBRO. ALL SUBROUTINES CALLED IN A NEW, VERSION, OR TRANSFERRED PROGRAM ASSEMBLY ARE NECESSARILY
0895 ACTIVE, SINCE A NEW PROGRAM IS BEING CREATED.

0896 VN, <NV>

0897 THIS IS A VARIATION ON DEC TO PACK TWO SEVEN-BIT FIELDS, REPRESENTING A VERB AND A NOUN, INTO ONE AGC
0899 WORD. THE VERB AND NOUN NUMBERS ARE WRITTEN IN THE ADDRESS FIELD IN DECIMAL, IN THE FORM VVNN (OR INDEED ANY
0901 FORM ACCEPTABLE TO DEC THAT COMES TO THE SAME VALUE). THE MAGNITUDE OF THIS EXPRESSION IS LIMITED TO 9999.
0903 THE PARTS VV AND NN ARE IN EFFECT CONVERTED TO BINARY SEPARATELY AND PLACED IN BITS 14-8 AND 7-1 OF THE WORD,
0905 RESPECTIVELY.

0906 0, 1, 2, 3, 4, 5, 6, 7

0907 THESE ARE THE ONLY NUMERIC OP CODES. THEY ARE ALL REGARDED AS REGULAR CODES (NON-EXTRACODE), AND AS FULL
0909 CODES, TAKING A 12-BIT ADDRESS PART. THUS CODE 2, FOR INSTANCE, COULD STAND FOR DAS, LXCH, INCR, OR ADS, DE-
0911 PENDING ON THE VALUE OF THE ADDRESS. IT COULD ALSO STAND FOR MSU, QXCH, AUG, OR DIM IF THE PRECEDING WORD IS A
0913 SECRET "EXTEND", I.E. OP CODE "0" AND ADDRESS "6". A NUMERIC OP CODE IS USUALLY USED ONLY WHERE THE OP CODE
0915 ITSELF WILL BE MODIFIED BY INDEXING.

0916 ZBCADR, ZCADR

0917 IN THE AGC ASSEMBLER, THE E-BANK VALUE MUST BE GIVEN BY A ONE-SHOT EBANK= DECLARATION. THIS IS OPTIONAL
0919 IN BLK2. IN EITHER ASSEMBLER, THE SUPER-BANK VALUE MAY BE GIVEN BY A ONE-SHOT SBANK= DECLARATION. SEE ALSO THE
0921 NOTE ON BBCON.

END OF REVISION 5 OF PROGRAM OPGUIDE BY HB-5
